Peter Schumacher Joins PushToTest as Director of Professional Services

CAMPBELL, Calif. USA, July 29, 2008 -- PushToTest, the world leader in open-source enterprise Service Oriented Architecture (SOA,) Web service, and Ajax test automation solutions today announced Peter Schumacher joined PushToTest as the Director of the new Professional Services group. The Professional Services group benefits enterprises by delivering PushToTest expertise at building, testing, managing, and monitoring SOA, Ajax, and Web applications.

Schumacher is a veteran of automated functional and performance testing. In 1994 Schumacher was Mercury Interactive's first service partner for LoadRunner for SAP and SAP BASIS. Schumacher's system performance analysis and load testing expertise assisted Volkswagon/GEDAS in getting the new Beetle car release back on schedule from a possible one year delay. Schumacher lead Texaco and Shell's first-ever performance testing strategies before and after their merger. Additionally, Schumacher delivered IT success at AMD, Petro Canada, Dell Computer, and ING Insurance. He was hands-on with each large enterprise to design and implement test planning, technical risk analysis, SAP implementation and integration, and test results analysis.

Schumacher is uniquely a top expert in HP LoadRunner, Mercury Quality Center, Quality Test Profession (QTP,) and the Mercury product family.

"We are delighted to have Peter join PushToTest," said Frank Cohen, CEO and Founder at PushToTest. "Normally experts in testing have experience in one area of testing. Peter brings experience with test management, development lifecycles, functional testing, load testing, service monitoring, and system integration testing to benefit our enterprise customers. This matches PushToTest's mission to deliver best of breed open-source tools, practices, and services for IT optimization and cost management. The PushToTest technology and methodology enable enterprises to repurpose functional tests as load and performance tests, scalability tests, and business service monitors in one platform."

About PushToTest

PushToTest is a professional open-source software publisher of test automation tools, methodology, and training to medium and large sized enterprises, including The Jackson Laboratory, General Motors, TIBCO, and Ford. PushToTest's mission is to provide flexible open-source test automation solutions that encourage repurposing and sharing among software architects, developers, Quality Assurance (QA) testers, and Information Technology (IT) Managers. PushToTest solutions integrate into modern software development environments and leverage agile, test-first, and unit testing expertise into functional tests, performance and load tests, and business service monitoring. PushToTest designed its technology for Service Oriented Architecture (SOA,) Ajax, Web applications, Web services, and REST applications. PushToTest is an extensible framework that is easily extended to handle new protocols, message formats, encoding styles, and test operations. PushToTest is a distributed architecture where tests scale vertically and horizontally. PushToTest solutions have 6 years of development, 5th generation, active development community, and a 3-year product roadmap. PushToTest solutions cost a fraction of competing commercial tools. Established in 2001, PushToTest is an established profitable professional software publisher with more than 160,000 users and thousands of enterprises.

PushToTest is a trademark of the PushToTest Company. HP, Mercury Interactive, LoadRunner, Quick Test Professional, and Quality Center are trademarks of HP.
